

Sentinel Adversarial Orchestrator

Plan, launch, and audit adversarial AI evaluations from one local-first command surface with cleaner defaults, collapsible evidence, and report-first workflows.

Live engines: IBM ART, Foolbox, PyRIT, Garak, and TextAttack are orchestrated through version-aware compatibility boundaries.

EXECUTION MODES

2

Black-box and white-box runs stay visible in the same operator surface.

LIVE ENGINES

5

ART, Foolbox, PyRIT, Garak, and TextAttack stay visible in one operator surface.

AUDIT LAYER

Norm

Original evidence and normalized artefacts stay separated for cleaner review.

Wrapper Capability Matrix

Compare registered wrapper support for backend types, frameworks, and white-box signals before you choose one for a job.

Framework Runtime Matrix

Local inference servers such as Ollama remain external infrastructure even when the scan framework itself is bundled in the platform environment. For supported deployments, install framework packages during the normal environment bootstrap and use preflight to confirm local model server reachability before running jobs.

FRAMEWORK	INSTALLED	VERSION	PACKAGE	DELIVERY	NOTES	ACTION
art	Yes	1.20.1	adversarial-robustness-toolbox	bundled python dependency	Required for built-in ART executor and ART-capable wrappers.	Upgrade
foolbox	Yes	3.3.4	foolbox	bundled python dependency	Required for built-in Foolbox executor and Foolbox-capable wrappers.	Upgrade
pyrit	Yes	0.13.0	pyrit	bundled python dependency	python >=3.10 <3.14 Required for the built-in PyRIT API executor. Local model servers remain external infrastructure.	Upgrade

WRAPPER	MODALITIES	TASK FAMILIES	API	LOCAL	BLACK-BOX	WHITE-BOX	ART	FOOLBOX	LOGITS	GRADIENTS
HF Speech-to-Text ART Adapter	audio	speech-to-text	No	Yes	Yes	Yes	Yes	No	No	Yes
HF OCR ART Adapter	vision	ocr	No	Yes	Yes	Yes	Yes	No	No	Yes
HF Vision Classification ART Adapter	vision	vision-classification, image	No	Yes	Yes	Yes	Yes	No	Yes	Yes
